EVENT SUMMARY

7th CEREBROVASCULAR GRAND ROUND Webinar, 13 July 2021

The 7th chapter of the great Cerebrovascular Grand Round Webinar, held under the auspices of the MENA STROKE Organization, American Stroke Association, and World Stroke Organization, and supported by Boehringer Ingelheim and Medtronic, was an instructive session that provided comprehensive education about Ischemic Stroke, Secondary Stroke Prevention and its latest treatments and management. 1661 delegates from 42 countries around the world have been benefited from this webinar. It was conducted in a very organized and effective manner and the attendees have been rewarded with 2 CME hours.

Dr. Suhail Abdulla Alrukn, President of MENASO and Consultant Neurology at Rashid Hospital, UAE, has appointed **Dr. Taleb M. Almansoori**, Assistant professor of Radiology, College of Medicine and Health Sciences, United Arab Emirates University,

Dr. Isam Sayed Salih, Consultant - Neurovascular - Chairman of Division, Sheikh Shakhbout Medical City, Abu Dhabi, UAE as Chairmen for the webinar and **Dr. Syed Irteza Hussain**, Department Chair, Neurology, Neurological Institute, Cleveland Clinic Abu Dhabi, and **Dr. Mohammed Al Kuwaiti**, Consultant Neurologist at Tawam Hospital, Al Ain, UAE as the speakers.

Webinar Chairmen **Dr. Taleb M. Almansoori** has delivered the opening remarks and introduced **Dr. Syed Irteza Hussain** to deliver his lecture on Relevance of the cerebral collateral circulation in ischemic stroke.

He started the session with an introduction to cerebral collateral circulation, which he refers to as a network of vascular channels that provide alternative routes for blood flow when the primary route fails. The lecture covered the topics such as intracranial collaterals, extracranial collaterals, imaging of collaterals, collateral flow augmentation, and compared the influence of different assessment techniques.

He said that collaterals preserve tissue in the acute ischemic model and influence infarct growth and final infarct volume. **Dr. Syed** pointed out that additional research is ongoing on the augmentation of collaterals to improve outcomes.

Webinar Chairman **Dr. Isam Sayed Salih** has introduced and welcomed **Dr. Mohammed Al Kuwaiti** to deliver the talk on Secondary Prevention of Stroke.

His lecture on Secondary Prevention of Stroke was a rare informative session that centered on cryptogenic (ESUS) stroke secondary prevention. He defined cryptogenic stroke as a stroke of unknown cause and the term ESUS as Embolic Stroke of Undetermined Source.

Dr. Mohammed Al Kuwaiti focused on the approach in diagnosing the underlying cause of cryptogenic stroke, the potential role of Atrial fibrillation, and Atrial cardiopathy and PFO. He also shared the recommendations for stroke prevention in 2021.

Cryptogenic stroke is a very common diagnosis after a stroke and a complete workup is necessary to prevent it. Therapy is currently with antiplatelet unless specific etiology was identified. Prolonged cardiac monitoring increases rates of detecting atrial fibrillation.

He concluded that PFO closure remains reasonable in patients aged from 18 to 60 years.

Webinar Chairmen **Dr. Taleb M. Almansoori** and **Dr. Isam Sayed Salih** have conducted the interactive Q&A session. They along with the speakers have expressed their appreciation and thanked the attendees for their participation.

CHAIRMAN

Chairman

Dr. Taleb M. Almansoori
MD, DABR, FRCPC

Assistant professor of Radiology
College of Medicine and Health Sciences
United Arab Emirates university

Chairman

Dr. Isam Sayed Salih

Consultant - Neurovascular
Chairman of Division
Sheikh Shakhboub Medical City,
Abu Dhabi, United Arab Emirates university

SPEAKERS

Speaker

Dr. Syed Irteza Hussain

Department Chair, Neurology,
Neurological Institute
Cleveland Clinic Abu Dhabi

Speaker

Dr. Mohammed Al Kuwaiti

Consultant Neurologist,
Tawam Hospital, Al Ain,
United Arab Emirates university

QUESTION & ANSWER SESSION

QUESTION & ANSWER SESSION

- Thanks a lot to honourable speakers for this informative seminar!
I have a question. If a patient who is taking dual antiplatelet for previous coronary stent insertion got a stroke (NIHSS 4) 8 hrs ago, what initial treatment must I give? (Where there is no thrombolysis and thrombectomy available) (1) Dual antiplatelet loading dose (or) any other recommendation? (2) How about anticoagulants? Thank you so much again!

- is there any modality to predict who can have good or less collaterals in those people with risk factors for ischemic stroke ?

- what is your recommendations for type, dose, and duration of antiplatelet therapy for secondary prevention after cryptogenic strokes

- How useful is doppler in screening the small clots in big vessels.

- are we doing any screening of the patients with expected cerebrovascular event as many patients present s/s of slow cerebrovascular thrombosis.

- Seems like slow and rapid progressors reflect collateral status??? Thanks

- good day
some time after I wake up from sleep I am having severe headaches back side of the head

- good evening
Thanks for informative session if pass golden time thrombolysis do you go for angioplasty or you just give antiplatelets
- what is your recommendations for type, dose, and duration of antiplatelet therapy for secondary prevention after cryptogenic strokes
- how useful is doppler in screening the small clots in big vessels.
- what is role in acute stroke do give 2 antiplatelets or one newer powerful new antiplatelets and for how long
- regarding stroke intervention under NIHSS 5, there are now good trials available to thrombolysed them with tenecteplase with good results.
- in acute emergency HTN pt who developed stroke how much decline in blood pressure in Hemorrhage or thrombosis
- Is there any relation between collateral circulation with age, as well as the life style of a person. And other than ebolectomy what is the most convenient non invasive intervention for the stroke managements
- IF NEUROLOGICAL SYMPTOMS DO NOT CLEAR AFTER THREE MONTHS OF ANTI PLATELET THERAPY, WHAT DO YOU DO NEXT
- how can we predict likelihood of reperfusion injury in our pts undergoing intervention? any relation to collateral?
- Maybe Rx window be further extended in future based on collateral score???
