EVENT SUMMARY

10th CEREBROVASCULAR GRAND ROUND Webinar, 12 October 2021

The 10th episode of the successful series of Cerebrovascular Grand Round Webinar, held under the auspices of the MENA STROKE Organization, American Stroke Association, and World Stroke Organization, and supported by Boehringer Ingelheim and Medtronic, was a unique session to provide comprehensive education about Stroke challenging case, and Acutely Ruptured Intracranial Aneurysms. It revealed the updates in diagnosis and treatments of the condition. The webinar has helped 1192 delegates from 27 countries around the world and they have been rewarded with 2 CME hours.

Dr. Suhail Abdulla Alrukn, President of MENASO and Consultant Neurology at Rashid Hospital, UAE, has appointed **Prof. Dr. Husam Salah**, Neurology Consultant, Professor of Neurology Cairo University, and **Dr. Maria Khan Junaidi**, Specialist Neurologist, Rashid Hospital, UAE, as Chairmen for the webinar and **Dr. Elyar Sadeghi Hokmabadi**, Interventional Neurologist, Head of Stroke Care Unit, Imam Reza Hospital, Tabriz UMS, Iran, and **Dr. Fawaz Al Sharif**, Interventional Neurointervention Consultant, Saudi German Hospital, KSA, as the speakers.

Webinar Chairman **Prof. Dr. Husam Salah** has delivered the opening remarks and introduced **Dr. Elyar Sadeghi Hokmabadi** to deliver his lecture on **Stroke challenging cases from Iran**.

Dr. Elyar has presented 2 challenging cases during his informative lecture. Case 1 was related to a 60 year old lady presented with sudden onset headache and imbalance and her physical examination was quite normal but with some gait ataxia. She had two cardiac surgeries such as prosthetic mitral valve replacement 35 years ago and prosthetic Aortic valve replacement 11 years ago. He explained the 2 main challenges faced during her treatment and various options to tackle them. Case 2 was about a 38 year old woman referred with headache and seizure and she had progressive headache since 5 days ago. On admission, she was Comatose and had left sides weakness on painful stimulation. She had taken 4 pills of OCP and no history of Covid-19 infection or vaccination.

In conclusion, he suggested to use 6-13 role to reinitiate anticoagulation for patients with mechanical heart valve and ICH. In patients with AF, closure of LA appendage during cardiac surgery, significantly decreases the risk of thromboembolic events. In patients with CVT who undergo invasive cranial procedures, do not rush to restart anticoagulation.

Webinar Chairman **Dr. Maria Khan Junaidi** has introduced and welcomed **Dr. Mohammed Al Kuwaiti** to deliver the talk on **Flow Diversion for Treatment of Acutely Ruptured Intracranial Aneurysms**.

His lecture on Acutely Ruptured Intracranial Aneurysms was a unique instructive session that centered on all aspects of its treatment. During the presentation, he shared his knowledge on flow diverter technique, challenges especially in acute cases, evidence based medicines, and challenging cases with Acutely Ruptured Intracranial Aneurysms. Cerebral aneurysm is an abnormal dilatation of intra cranial artery and its prevalence is 2% of the population. There are different types based on the shape and size. He detailed the cases, treatment methods and challenges from his vast experience. He commented that flow diversion is alternative strategy for management of acutely ruptured aneurysms with high rates occlusion and acceptable complication rates.

Dr. Maria Khan Junaidi has conducted the Q&A session. The interactive session was fruitful with many questions from the attendees. **Prof. Dr. Husam Salah** has expressed his gratitude to the attendees for their participation and appreciated the effort by the speakers during his closing remarks.

CHAIRMAN

Chairman

Dr. Husam Salah

Neurology Consultant,
Professor of Neurology Cairo University

QUESTION & ANSWER SESSION

- Why did not they give Mannitol for immediate lowering of ICP, Doctor?
- Could not mannitol treatment in the early stage if started and monitored could minimize the risk of developing hydrocephalus?
- What's your take for high dose statin therapy in clients post hemorrhage stroke?
- For patient with cerebral venous thrombosis why LMWH dose was give intravenous instead or subcutaneous?
- May for CVT patient better to use preventive dose for LMH first 48-72 hours after surgery then switch to therapeutic dose?
- Female patient 50 years age presented with headache and right 6 nerve weakness her MRI showed thrombosis aneurysm of internal c arotid artery 26 mm size. Kindly comment on prognosis and treatment.

- How to diagnose RCVS and what is its treatment?

- Regarding the first case. When to introduce prophylactic anticoagulation in hepatic patient presenting with cerebellar hemorrhage and inr 2.5 or above the normal value generally

- Will coiling be successful if there is vasospasm? What to do in such situation?

- Dose use of ASA can help minimizing size of aneurysms?

- What are the chances of remission of thrombosis post-surgery to other organ?
